Portfolio: mikeships.vercel.app

PROFESSIONAL SUMMARY

Full-stack software engineer who connects dots across building, running and selling technology. Builds full-stack web, mobile and desktop apps for clients and integrates them with third-party payment systems (M-Pesa, Paystack). Uses AI and imaging technologies in the daily build workflow. IT professional with hands-on technical support experience - troubleshooting hardware, software and network systems to keep operations smooth. An outspoken communicator who explains complex technology simply; communication is treated as the ultimate skill. Currently venturing into marketing with AI - building apps and automations that are tested against one question: do they actually win customers? Shipped live products include a mobile-first tourism trip planner (KenyaTrace), an e-commerce storefront (GiGi Energy Drink) and a legal practice workspace concept (LegalFlow).

ENGINEERING HIGHLIGHTS

- Ships full-stack apps end to end: React + TypeScript frontends against typed Convex backend APIs, with Git-to-Vercel deployment.
- Integrates third-party payment systems into client apps - M-Pesa-first ordering and Paystack tips with server-side transaction verification and webhook reconciliation.
- Builds and ships live products: KenyaTrace (kenyatrace.vercel.app), a list-first tourism trip planner built for 3G conditions; GiGi Energy Drink storefront (gigiflavours.vercel.app) with a shortened mobile checkout; LegalFlow (law-ten-iota.vercel.app), a matter-and-billing workspace for small law firms.
- Uses AI and imaging technologies in the build workflow - sourced outputs held to manual review, with evals and safe-fail patterns.
- Quality in daily use: Playwright end-to-end suite covering routes, CTAs, dialogs, form validation and the 404 path; tsc typecheck gates; fixes traced to root cause in browser DevTools.
- Marketing in progress: applying AI tooling to position, explain and sell shipped apps - testing whether products actually win customers, not just whether they run.

EXPERIENCE

- Freelancer & Full-Stack Software Engineer - Self-employed, Nairobi / Remote (Feb 2025 - Present). Web, mobile and desktop apps for clients with third-party payments; currently venturing into marketing with AI.
- ICT Intern - Council of Legal Education, Kenya (Jan 2024 - Feb 2025). Technical support and ICT operations for the council.
- IT Clerk - IEBC, Kenya (Jul 2022 - Oct 2022). Hardware, software and network support; staff training.
- Junior Software Engineer - Freelancer.com (Jul 2021 - Feb 2022). Web apps for clients.

KEY SKILLS

- Engineering - TypeScript, React, Next.js, semantic HTML, CSS/Tailwind, REST-style API integration, typed data contracts, responsive layouts.
- Full-stack delivery - Convex APIs, third-party payment integration (M-Pesa / Paystack), mobile and desktop app builds, Git/GitHub, Vercel deployment.
- IT & operations - technical support, hardware/software/network troubleshooting, device setup, staff training, smooth-systems operations.
- AI + imaging - AI-assisted building with manual review, imaging technologies in the workflow, automation for small businesses.
- Marketing & communication - explaining complex technology simply, customer-fit testing, AI-assisted marketing.
- Tools - Playwright, GA4, Git, Figma. Languages - English (fluent), Kiswahili (fluent).

EDUCATION

Bachelor of Information Technology South Eastern Kenya University (SEKU), Kitui, Kenya (2015 2020)
